

eMag Awarded ISO Certification

ISO/IEC 27001:2005

eMag is the FIRST Electronic Discovery company to have its worldwide data processing facilities ISO/IEC 27001:2005 certified.

In December 2008, eMag was awarded ISO/IEC 27001:2005 certificate number 535307 for its US operations center. The award was received from BSI Management Systems, a leading information security management systems (ISMS) certification body. The award is reviewed annually.

eMag Solutions is a leading Electronic Discovery and Data Management vendor

and a full service provider for data access, restoration, and processing, offering proactive and reactive solutions for litigation, regulatory, and compliance matters.

eMag products and services allow clients to shrink costs, reduce risk, and promote organizational effectiveness through enterprise content management.

eMag depends on information security, which can only be achieved by applying secure practices to information technology management. While vendors advertise security, eMag is pre-certified, which means that clients are not required to take the time and invest the expense in auditing eMag facilities and processes when handling clients' confidential data.

eMag's security measures have long been models for the industry, and eMag has further demonstrated its deep commitment to the achievement of appropriate high levels of information security and data management by implementing its ISO/IEC 27001:2005-compliant Information Security Management System (ISMS).

ISO/IEC 27001:2005 is an ISMS standard published by the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC) that identifies, manages and minimizes a range of threats to business information.

Certification is achieved exclusively by companies that demonstrate the highest competency in information security management and it is the only auditable international standard to define the requirements for ISMS.

ISO/IEC 27001:2005 is widely considered a gold standard in information security, providing guidelines for implementing a constructive risk management process, setting up policies, and ensuring a secure infrastructure is in place. The standard shows that a business has taken preventive measures to protect clients' data, and demonstrates to customers and prospects that the business is observing a duty of care.
