

Every organization faces the prospect of losing key executive talent and employees each year. eMag Solutions can help limit the risk of organizational liability from these departures.

Whether recruited by other organizations, terminated, or simply looking for other opportunities, top level managers and C-level executives depart corporations, leaving gaps in continuity and creating potential exposure and liability for actions undertaken during their employment. Mid-level employees also leave behind information on their computers that can be critical in addressing legal matters.

eMag Solutions is pleased to offer a proactive solution to safeguard against potential litigation, regulatory, or compliance liability through its forensics capabilities.

eMag Solutions will create a forensic image of the hard drive for any departing executive or key employee and store the information for 1 year on our network archive.

Imaging is a bit-by-bit replication of the original digital evidence, using court-approved methods and software to capture a forensic copy of the hard drive.

eMag is able to copy computer hard drives of departing executives, and search through e-mail messages that may be saved on a hard drive, including examination of e-mail files still saved on the system. This can even include saved screen shots from web mail accounts such as Yahoo!, Gmail or Hotmail.

Forensic Imaging will allow the organization to view deleted files, printed documents, internet related files and hidden directories.

We Determine Such Information As:

- What files were deleted
- Which applications were installed or uninstalled
- Which websites has the user visited
- When the computer was last used
- If data was copied off of the computer

eMag Can Retrieve Files Hidden By:

- File Renaming,
- Password Protecting,
- Encryption,
- Compression, or
- Other techniques
